Sr. No.	Topic	Page No
1.	INTRODUCTION	1
2.	MATERIALS AND METHODS	25
Division I: - Type I diabetes in relation to female sex steroids in individuals: Melatonin as an alternative therapy for type I diabetes in sex steroid deficiency.		
3.	CHAPTER 1: MELATONIN SUPPLEMENTATION THERAPY (MST) AS A POTENT ALTERNATIVE TO ERT IN ALLEVIATING ALTERED INSULIN SENSITIVITY, GLUCOREGULATION AND DYSLIPIDEMIA: DOSE DEPENDENT STUDY IN ESTROGEN DEFICIENT OVARIECTOMIZED RATS.	62
4.	CHAPTER 2 : MELATONIN SUPPLEMENTATION IS MORE EFFECTIVE THAN ERT OR EVEN A COMBINATION OF THE TWO IN AMELIORATING OVARIECTOMY INDUCED TISSUE OXIDATIVE STRESS, HEPATIC AND RENAL DYSFUNCTIONING AND SERUM CORTICOSTERONE LEVEL.	96
5.	CHAPTER 3: DIABETIC GLUCOSE DYSHOMEOSTASIS AND DYSLIPIDEMIA IN ESTROGEN DEFICIENT RATS: MELATONIN SUPPLEMENTATION MORE POTENT THAN ERT IN ALLEVIATING THE SYMPTOMS.	121
6.	CHAPTER 4: DIABETIC OXIDATIVE STRESS AND HEPATIC AND RENAL DYSFUNCTIONING IN ESTROGEN DEFICIENT RATS: RELATIVELY GREATER EFFICACY OF MELATONIN OVER ERT IN REMEDIATION.	153

Division II:- Impact of neonatal stress on adult onset of diabetes and its manifestation and role of melatonin: Comparative studies in males and females.

7.	CHAPTER 5:	180
	MELATONIN CAN EFFECTIVELY DEPROGRAM THE NEONATAL CORTICOSTERONE INDUCED ADULT METABOLIC DYSHOMEOSTASIS AND TISSUE OXIDATIVE STRESS AND DISTRESS.	
8.	CHAPTER 6:	214
	A MELATONIN TREATMENT SCHEDULE AMELIORATES NEONATAL CORTICOSTERONE PROGRAMMED EFFECTS ON ADULT METABOLIC DEVIATIONS AND INCREASED TISSUE OXIDATIVE STRESS.	
9.	CHAPTER 7:	246
	NEONATAL CORTICOSTERONE PROGRAMS FOR THRIFTY PHENOTYPE ADULT DIABETIC MANIFESTATIONS AND OXIDATIVE STRESS: COUNTERING EFFECT OF MELATONIN AS A DEPROGRAMMER.	
10.	CHAPTER 8:	279
	NEONATAL CORTICOSTERONE PROGRAMMING AND ADULT THRIFTY PHENOTYPE FOR DIABETIC MANIFESTATIONS: AMELIORATIVE POTENTIAL OF MELATONIN.	
11.	CHAPTER SUMMARIES	310
12.	BIBLIOGRAPHY	318
